

Using AutoCAD is an engineering experience; it's a completely integrated design solution, and it's based on an extremely powerful platform: Autodesk's integrated development environment (IDE), which includes 3D tools and a robust set of drafting tools. Most important, the entire AutoCAD experience is based on drawing, the most intuitive and versatile way of creating, exchanging and modifying geometry. The AutoCAD software suite is the most popular commercial CAD platform in the world. AutoCAD and related software applications are used to create blueprints, electronics schematics, structural designs, architectural designs, and visual designs for engineering and architectural work. The latter include creating digital facades, energy efficient designs, mining designs, healthcare and interior design, manufacturing drawings, presentation and construction drawings, and transportation design. Key features in AutoCAD The basic features of AutoCAD include: Graphical User Interface (GUI). AutoCAD is the only product in the world to implement a GUI. The GUI is tightly integrated with the application. Network.

AutoCAD is one of the only CAD products on the market that can use network protocols to send and receive file-based updates. Native. AutoCAD is a native desktop app; no need to install an operating system. 3D environment. AutoCAD is a 3D CAD application, drawing in 3D space. Mobile. AutoCAD's web and mobile app versions are based on the same technology, and both support the same commands and geometry. Compatibility. AutoCAD is one of the most compatible CAD applications on the market. Flexibility. AutoCAD is built on an open platform; it's designed to be flexible enough to meet the needs of a variety of users. Modular. AutoCAD includes a set of modules that can be combined to meet a variety of tasks. For example, Civil 3D includes separate modules for basic 2D drafting, Civil 3D development, and 3D plotting. Data exchange. AutoCAD is compatible with almost every file format that can be used with AutoCAD; the application also supports auto-detecting most of the file formats supported by other CAD products. Generating reports. AutoCAD includes modules for generating paper and electronic reports. Modeling. AutoCAD includes a set of

Software development kits The Autodesk Development Network provides a number of free SDKs for AutoCAD and other applications that allow developers to create applications that are tailored to specific needs. The following are some of the most commonly used APIs: AutoCAD Software Development Kit (SDK) Architecture Development Kit (ADK) Electrical Development Kit (EDK) Civil 3D Software Development Kit (SDK) AutoCAD plugins AutoCAD supports plugins for every imaginable application. Some of the most popular plugins for AutoCAD are: AppMethods Blender Interoperability ClassLoader DWG to PDF DWS Fracture Modeling FPSC Lissajous Macros MFC ORBIS QR Projector RF BOM Structurebuilder AutoCAD also has a developer site at autodesk.com/autocad/developer that has tutorials for both AutoLISP and Visual LISP, how to write AutoCAD plug-ins, and the documentation for AutoCAD's various APIs. AutoCAD Plugins can be used to extend AutoCAD with any desired features or functionality. There are a number of third party companies that offer AutoCAD Plugins. Some of the more popular ones are: CreateSpace Plug-ins and AutoLISP Most of AutoCAD's controls, algorithms and tools are implemented as plug-ins, although a handful are implemented in AutoLISP. A plug-in is a standalone program which provides additional functionality or new user interface for a particular function. The most popular plug-ins are usually developed by Autodesk or third parties, and the AutoLISP plug-ins are usually developed by Autodesk employees. AutoLISP AutoLISP is a programming language created by Autodesk, to allow developers to write plug-ins for AutoCAD. AutoLISP was the primary language used for developing plug-ins until AutoLISP 3.0 was released on February 10, 2006. AutoLISP supports object-oriented programming. For example, the following statement declares and creates a variable, and assigns a value to it. (*ACADLIB *)

2. Right-click on the printer and choose "Edit Topology" 3. Go to the "Draw objects" category and click "Add" 4. Choose the first polygon that you made earlier and press "Ok". 5. In the dialog that appears, choose the "Nearest neighbor" option. 6. If you don't like the result, click on "Reset" to change the settings to their default values. 7. You can now use the printer's keyboard, just click on the blue line and change the settings. 8. If you wish, you can add more objects in the same way.

What's happening in Africa that we're missing? I've been thinking about what goes on in Africa that we're missing out on, that we're not seeing, that we don't know about. Here's what I came up with so far. Anecdote: While in the Amazon for the pre-ordering of The Long Haul, I had the privilege of spending time with Mennonites living on the perimeter of one of the world's largest rain forests. They have lived there for several centuries and keep a very basic lifestyle — they never use electricity, they are mostly subsistence farmers and ranchers and take care of the land and of the rivers and the animals. I was very moved by their insights and their humility. Another anecdote: Living in Kenya. We could not buy tea anywhere. We had to make it ourselves. I remember it was a ritual. Tea was served on Sunday morning and after that we just drank it throughout the week as we felt we had earned it. I remember another time, we were invited to a dinner, and while getting dressed I realized that I was wearing the same clothes as my husband. I took a shower and changed and I thought to myself that I've become comfortable with the fact that I will never be the same again. There are a lot of interesting things happening in Africa, and I'm not even talking about what's going on in Uganda, but I just think we live in a world that's so fast paced, and that everything happens in a linear way that our own sense of time and of movement is based on the past and the future, that we forget that sometimes there is a pause, that there are
