Time and time again, we are exposed to the yucky, white, plastic-y things that one needs to move a bit of cargo around. Kia understands that and has stepped up to the plate with a new crossover that they say is "mastered for the city." The second-gen Kia Soul arrives for the Frankfurt Auto Show, a vehicle that has been debuted at other auto shows around the world and of which we took a closer look at during the Frankfurt Motor Show in September. The vehicle is the result of a collaboration between Kia and Soul creative director Alex Chao, who previously worked on design for the Kia Sorento. It's new in a few ways, starting with its exterior styling. Instead of the SUV-like look of its predecessor, the Soul has a more European and up-to-date feel. The vehicle has a face that brings to mind a little Kia Optima with a coupe-like hood. But, despite its classic look, the vehicle will get Kia's new "Tiger Nose" grille. The second-gen Soul's cargo area has been made smaller, compared to the previous model. The rear seats have been moved to the inside to make room for larger ones. There is still ample room in the back, but it's not as big as the previous model. The upholstery looks comfy and the interior design is funky and contemporary. As for the performance and handling, we won't know all of the details until we get the car in May, but in the meantime Kia has shown off the vehicle in the snow during a video and various new images. The vehicle has one of the best cabin designs out of any vehicle on the market. On the inside, the second-gen Soul has many fun features, such as a dashboard mounted knob that turns the sound of the engine up and down. There is also a wireless connection feature that allows you to connect a1d647c40b
