Open Objects—In 2008, Autodesk launched Open Objects, a set of open source software applications based on the ObjectARX object and architecture (OAA) platform. The main component of the Open Objects platform is the Application Programming Interface (API), which provides basic building blocks for application developers to build their own applications. The ObjectARX platform is Open Object's base platform and is a C++ class library. The Open Objects Platform supports Autodesk Exchange Apps that run on Windows, Mac OS X, and Linux. The OAA is a component of the Autodesk Exchange App Store application. The Open Objects Platform has two primary models, a hosted API and a self-hosted API. The self-hosted API allows the application developer to run the Open Objects API locally on their own computer system and the application can be distributed to users as a stand-alone application. The hosted API is provided by Autodesk to developers who want to create their own Autodesk Exchange apps using the Open Objects platform. The hosted API is a web-based application that provides an interface for application developers to create their own Autodesk Exchange apps. History The AutoCAD 2002 released the DXF file format, which has been expanded upon in all subsequent versions. Version 2014 introduced new functionality in the DXF file format. The toolbar is the same as in your standard version. You can see that the new version is not activated. Now we open the menu Addons, and then create a copy of the old plugin and call it the "old version" - The tools menu is exactly the same as in your standard version. We check that the new version is not activated. Then we activate the "new version", and go to the main menu and click on "Toolbars > Make it now" and "Addons > Make it now". Now we have both new and old toolbars in our plugin manager. We select the old toolbars in the Manager and activate the "old version" - We now also have the new version on the same. Now we select the new version in the Manager and activate it. You now have two toolbars, the old one is the old version, the new one is the new version. Autodesk Autocad: Windows 71. Technical Field The present invention relates to a liquid ejecting head and a liquid ejecting apparatus that eject liquid from nozzle openings. 2. Related Art In the past, as one of recording apparatuses that record images on a recording medium, such as a printing paper, an ink jet printer has been known. In the ink jet printer, ink is ejected from the nozzles of a liquid ejecting head, and the ink is landed on the recording medium, such as the printing paper, to record the image thereon. In the recording apparatus, ink may adhere to the liquid ejecting head to increase an amount of ink ejected from the liquid ejecting head, or ink may accumulate in the nozzle opening to cause an ink ejection defect. Accordingly, the recording apparatus is usually provided with a recovery mechanism for cleaning or the like of the liquid ejecting head. As a recovery mechanism, for example, a recovery mechanism that includes a liquid absorbent member is known. In this recovery mechanism, a recovery operation is performed on the liquid ejecting head by using the liquid absorbent member to soak up ink ejected from the nozzle openings or ink that has adhered to the liquid ejecting head. As another example, an ink-jet printer provided with a capping mechanism for covering a nozzle opening surface of a liquid ejecting head is known (for example, JP-A-2005-19941). In this printer, a pressure is applied to the nozzle
