Discount retailers including Mother and Urban Outfitters have been climbing the steep wealth ladder by rolling out shops in the West Village mainstay. And now, Chanel and Charlotte Russe, both of which made their names in the 1950s, will be among brands hawking menswear, watches and fine jewelry in the store. The store's recent history is checkered. It closed for two days last year, after a four-year legal battle between the company and the building's owner, Equity Residential. In 2016, the owners sued Equity Residential, the parent company of the West Village development that owns Barneys, for what they called a "breach of warranty" regarding the property's condition. Equity Residential countersued, alleging that Barneys owed back rent and had falsely told the building's owner that the company would renovate the store. The countersuit also said that Barneys' retailers had failed to properly maintain the store and to follow the landlord's retail guidelines. The parties have since settled, and Barneys reopened in September. "It has been a long, difficult time, but in my mind, it was a necessary journey," said David Katz, Barneys' senior vice president of operations, in an interview. In February, some tenants who remain at the Barneys were shocked to hear that a Canadian company, Beau's All American, would be taking over the store. Beau's was founded by a former Barneys executive, who said that she didn't know the Barneys lease would be extended when she signed it, and that she found the product

when she visited the store in 2014. It was easy for stores to enter the Barneys market, Katz said, because of the Barneys shoppers' familiar brand. Beau's All American will have a French language speaker on hand. The store is opening with several goals in mind, according to Katz: more modern, less expensive, and a combination of cosmetics and a watch a1d647c40b

What's New In AutoCAD?

Editing & Markup + 2D layer and automatic saving: Work on AutoCAD projects faster by combining the powerful drawing tools in AutoCAD with the rich features of any text editor. For instance, enter a value in a parameter and the next time you save, the value automatically appears in the drawing. Additionally, you can make a new text object directly from a command line, without having to open a text editor or create a new drawing. In addition to using the familiar user interface, you can also use the powerful text editor, Cursor X and Cursor Y. To do so, simply press F8 and a text editor will open. With this new feature, you can create multi-level tables, check text spacing and style, add bullets and more. (video: 1:17 min.)
