The present invention relates to a crystalline form of (–)-Hydroxycitric acid (HCA), which is used herein to mean citric acid, and including salts of citric acid, as well as esters and ethers of citric acid, thereof in the form of pure enantiomers or racemic mixtures thereof or in the form of both enantiomers or of various ratios thereof. The invention also relates to pharmaceutical compositions containing this (–)-hydroxycitric acid and to uses thereof. Other uses of HCA in the present invention are described below in other parts of the present disclosure. It is generally known to use citric acid and its salts for the treatment of conditions such as obesity, reduced carbohydrate tolerance, and diabetes. Citric acid has the chemical name citric acid, 1,2,3,4,5,6-hexakis-(hydrogenocitrate), and the molecular formula is C₆H₈O₇. Citric acid and its salts can be obtained by decarboxylating tartaric acid (i.e., removing oxygen from tartaric acid) or by hydrolyzing citrates (i.e., esters of citric acid) in the presence of alkali.
